

Lot Tracking and Work-In-Process (WIP)

OnSite™ makes it easy to maintain complete lot traceability and real-time production reporting. OnSite tracks part and material movement on your shop floor, automatically capturing the relationships between materials, workstations, employees and finished goods without requiring any hand-written data.

- Report WIP and production to ERP systems in **real time**
- **Track materials**, scrap, tools, employees, finished goods and more, by job, date, and time
- Use **bar codes and RFID** for faster and more accurate reporting and data collection
- **Integrate directly** with PLCs, scales, and other 'smart' equipment for data collection with no overhead
- Allow **efficient workflow** with rule-based interface
- Respond to operators with **real-time validation** of jobs, part numbers, recipes, and more
- Support multi-step and **outside processes** such as plating and heat treating
- **Print labels** for WIP, inventory, and finished goods
- Support **1-to-1** as well as **mixed batch** lot tracking
