

Production Reporting and Job Costing

OnSite™ allows your shop-floor personnel to report production and job activity directly, replacing hand-written forms and transcription. OnSite's Terminal Interface module allows you to create custom displays and interfaces for your employees that streamline the data collection process.

OnSite is compatible with touch-screen displays, portable scanners, and industrial terminals, and can integrate fail-safes, PLC signals, relays and more to produce a complete and intuitive interface.

- Replacing job sheets, scrap reports, and other paperwork with **direct entry** saves time and improves accuracy
- Real-time **validation** as data is entered improves accuracy and completeness
- **Smart interface** allows employees to follow the most efficient workflow
- Production data can be shared with your ERP system in **real-time**, or through a review-and-approve process
- **Direct integration** with equipment enforces required processes
- Integrated **workflow management** enforces the correct procedures
- **Role-based security** restricts access to authorized users, protecting the integrity of your data

Reports and Alarms

OnSite has real-time access to critical shop-floor information, such as productivity, job status, and machine utilization. Its integrated reporting and alarm system can send proactive messages and alerts as events occur.

- Send reports and alarms via **e-mail**, **phone** and **pager** or post them directly to your Intranet
- Use **Interactive reports** for quick searching and analysis
- **Summarize** critical data for at-a-glance status reports
- Access the **open SQL database** via most 3rd-party reporting tools
