

Shipping and Receiving

OnSite leverages your ERP's Ship/Receive module by sharing PO, Order, and Inventory detail while allowing you to follow the most efficient process for your business.

- **Verify shipments** against Order and PO detail
- Process **multiple orders** simultaneously
- Track **lot information** automatically for both incoming materials and outgoing products
- **Enforce** proper work sequences and QA steps
- **Create labels** (bar code and RFID) for incoming and outgoing items
- Assign tasks by **priority** or employee role
- Track temporary **locations** and **quantities** for inventory and staging outside of your ERP system
- Provide **real-time updates** to inventory and ERP systems
- Display **custom reports** directly from ship/receive activity

OnSite supports your Inventory system by providing an efficient way to capture the movement, location, and use of raw materials, tooling, and assets, with minimal input by the operator.

- Supports **bar code**, **RFID**, and real-time locating systems
- Allows direct integration with **digital scales and counters** to capture weights and quantities automatically
- Provides smart workflow and **context-sensitive processing** so employees can collect data with little or no manual input
- Allows complete or **partial cycle counts** by one or more simultaneous users
- Enforces your preferred pick/put-away processes such as closest available or **first-in/first-out**
- Supports **real-time updates** to your ERP or WMS, or use OnSite's built-in inventory and asset database
- Includes **integrated location tracking** for sites without a dedicated WMS or asset management system
